## html

The HyperText Markup Language, or HTML is the standard markup language for documents designed to be displayed in a web browser.

2) Write JS code that reads XML file or JSON file and print the details as tabular data. (Assume appropriate members and data for the design and development of the required application).

index.html

```
<!DOCTYPE html>
<html lang="en">

<head>
  <title>Question 1 | 20MCMB15-IT</title>

## OUTPUT :

The screenshot shows a Firefox Web Browser window with the title bar 'Activities', 'Firefox Web Browser', and the date 'Apr 10 18:38'. The browser's address bar shows the URL '127.0.0.1:5500/index.html'. The page content is a table with 7 columns: First Name, Last Name, RollNo, Contact No., Email, Address, and Department. The table contains 6 rows of student data.

| First Name | Last Name   | RollNo   | Contact No. | Email                  | Address                      | Department              |
|------------|-------------|----------|-------------|------------------------|------------------------------|-------------------------|
